Top Skills

Priority ERP
AI Orchestration
ERP Integrations

Languages

Russian (Native or Bilingual)
English (Full Professional)
Hebrew (Native or Bilingual)

Certifications

ChatGPT Prompt Engineering for Developers
Introduction to IoT
Python for Data Science and Machine Learning Bootcamp
LangChain Crash Course: Build OpenAI LLM powered Apps
The Complete SQL Bootcamp: Go from Zero to Hero

Sergei Lerner

AI Product Manager | ERP + AI Integration | Priority ERP Expert | GenAI Products

Tel Aviv-Yafo, Tel Aviv District, Israel

Summary

One of the areas I've been focused on lately: building AI-native infrastructure on Priority ERP - a three-layer orchestration system where an agent understands business logic before it touches the system, not just the API surface. Beyond ERP, I build across the full AI stack: Medical - MedOp: voice-first orthopedic documentation. Whisper transcription in Hebrew, English, and Russian into structured clinical reports. FastAPI backend, React frontend, running on HuggingFace Spaces. Agentic - Sidekick: a LangGraph agent with an iterative worker/evaluator loop, Playwright browser automation, sandboxed code execution, and support for Claude, Gemini, DeepSeek, Groq, and Perplexity. Built for real tasks, not demos. IoT - Six-plus years running a production smart home stack: Home Assistant, Zigbee2MQTT, MQTT, Docker, MCP servers on a local NUC. Migrated from SmartThings to Zigbee2MQTT. The same architecture thinking I apply to ERP. The common thread: I build systems that understand context before they act. Open to consulting, technical collaboration, and the right full-time role. --- Stack: Priority ERP · OData · WebSDK · MCP Claude · LangGraph · LangChain · Groq · DeepSeek · Gemini · WhisperFastAPI · React · TypeScript · Python · Node.js · Docker Home Assistant · Zigbee2MQTT · FAISS · HuggingFace · Gradio

Experience

Apützē Labs

ERP & AI Integration Architect

July 2025 - Present (11 months)

Tel Aviv District, Israel

Designing ERP integration architectures that connect Priority systems with automation frameworks and AI-enabled workflows.

Key initiatives:

- Priority MCP Integration Layer – Architected a Model Context Protocol (MCP) server enabling secure LLM interaction with live Priority ERP data, structured query execution and automated export pipelines.
- Built API-driven bridges between ERP platforms, databases and automation services using FastAPI, Python and Docker.
- Engineered multi-step workflows for operational automation, reducing manual processes and enabling structured data access.
- MedOp (AI Report System) – Designed and deployed a full-stack AI-driven system for structured medical report generation, integrating validation layers and secure backend architecture.

Technologies: Priority Web SDK, SQL, FastAPI, Docker, REST APIs, cloud deployments.

Lidorr Elements

ERP & Enterprise Systems Architect | Priority + D365 | Data Migration & Integration Lead

June 2021 - July 2025 (4 years 2 months)

Drove core system architecture at Lidorr by taking Priority from a legacy state to a fully integrated, automated and analytics driven environment.

Highlights:

- Built and maintained complex Priority integrations, APIs and SDK based workflows.
- Executed the Priority → D365 migration: data models, mappings, validations and E2E troubleshooting.
- Engineered pricing logic, customer history models and operational automations used across finance and logistics.
- Replaced manual processes with scripted pipelines, triggers and API services.
- Served as the go to tech authority for Priority, integrations and backend logic.

Bottom line:

I turned Priority from a bottleneck into an automation platform.

Tadiad

Priority ERP implementation and customization for enterprise clients.
August 2020 - January 2021 (6 months)
Israel

Tulip Information Systems

ERP Project Manager

September 2016 - June 2019 (2 years 10 months)

Led strategic, logistics and financial projects at Shila, part of Clalit Health Services.

Managed cross functional initiatives that improved operational efficiency, supported digital transformation and optimized resource utilization.

Oversaw end to end project delivery including planning, execution and stakeholder coordination across clinical, operational and financial teams.

Implemented data driven workflows that strengthened decision making and enhanced service quality.

E&M Computing

ERP Programmer

September 2014 - February 2016 (1 year 6 months)

Tel Aviv, Israel

Implementing the ERP Priority in EMET company's divisions, including data extraction, transformation and load.

Implementation of the Agile system (Product Lifecycle Management tool) including development of a 2 way interface between the systems.

Led the design and implementation of custom ERP components supporting cross-functional business operations.

Blades Technology LTD

ERP project manager

February 2012 - March 2014 (2 years 2 months)

Nahariya, Israel

Projects management of implementing the Priority ERP including design, development, staff training and implementation from go live onwards.

MedaTech

ERP Programmer

July 2011 - January 2012 (7 months)

European Schoolnet

Internship

February 2010 - March 2010 (2 months)

Education

Ort Braude College

B.Sc, Information Systems Engineering · (2005 - 2010)
